Dear Emma

Green on Pty Ltd Support of Energy Mad Submission on Proposed Victorian Energy Efficiency Target Regulations 2018

Thank you for the opportunity for Green on Pty Ltd to submit feedback on the proposed Victorian Energy Efficiency Target Regulations 2018.

Green on has always welcomed energy step towards sustainable energy. The proposed regulation will be one step forward to make the Victorian residential premises more energy efficient. Green on has contributed in the Veet scheme in various energy upgrades under schedule 21(GLS Globes, Downlights, Reflector lamps) . We so far have helped more than 2000 households and businesses to reduce the carbon footprints in the shape sustainable energy and looking forward to contribute more in the future. We are actively contributing in the Veet scheme under the schedule 21. As LED lighting is providing the more beneficial solution to reduce the energy consumption so either GLS lamps or CFL lamps needs to be upgraded to make the environment more sustainable.

We support Energy Mad's submission (Titled "Energy Mad Submission on Proposed Victorian Energy Efficiency Target Regulations 2018") on the proposed Victorian Energy Efficiency Target Regulations 2018.

In particular, we support Energy Mad's proposal that CFLs become eligible for replacement with LEDs in "Scenario 21A" of "Part 21 Activity – Incandescent lighting", and we support Energy Mad's proposed "GHG equivalent emission reduction variables" for Scenario 21A.

We believe the proposed amendments to Schedule 21A, combined with DELWP's "*fresh start*" initiative, would deliver significant volumes of cost effective VEECs.

Kind Regards
Munish Sharma (Director)
Green on Pty Ltd
